

WALO NATURO LINE

TAKE-BACK AND MATERIAL RECYCLING

WALO reclaims used **NATURO flooring** throughout Switzerland and Liechtenstein and sends it to be recycled. This ensures that precious raw materials remain in the material cycle and can be reused.

HOW THE TAKE-BACK SCHEME WORKS

1. **Request a return and obtain a quote**
Get in touch with WALO before returning your materials. Depending on the type of material, quantity, location and preferred return method, you will receive a personalised quote setting out the specific terms and conditions.

2. **Sort and prepare the material**
Before it can be recycled, NATURO material must be:
- sorted by type and kept separate from other kinds of flooring,
- free from pollutants that are now prohibited,
- free from bituminous bonding bridges and foreign adhesions,
- dry and handed over free from coarse impurities.

3. **Use suitable packaging**
The material must be kept dry and packaged in a way that ensures it can be transported safely. The following methods are particularly suitable:
- Big Bags,
- pallets with collars,
- covered skips.

The packaging must remain sealed during transport. Sheets, tape and other packaging materials should be removed before handover wherever possible.

4. **Drop off your materials or have them picked up**
Materials can be returned in two ways:
- Drop-off: Subject to prior arrangement, you can drop off the materials at a WALO works yard near you.
- Pick-up: For flooring covering an area of 250 m² or more, WALO will arrange for the materials to be picked up directly from the construction site or the contractor.

5. **Recycling the materials**
The returned material is collected, stored temporarily where necessary, and then sent for recycling in a technically appropriate and economically viable manner. Recycling facilities in Switzerland are used wherever possible.

Costs and terms and conditions

The costs are calculated on a case-by-case basis for each return. The following factors are particularly relevant:
- material quantity
- transport distance
- chosen return method
- packaging and logistics costs

Before returning your materials, you will receive a quote setting out the binding terms and conditions. This ensures that costs, services and responsibilities are clearly defined from the outset.
